## MICROSAVE

### "TO WHOM IT MAY CONCERN"

Having now tested the Microsave boiler optimising control unit for over three years we can confirm that the device has proved very effective at reducing energy consumption. Our initial tests monitored gas consumption on a number of selected test sites which were closely controlled by our managerial staff.

The second phase of testing over a three year period carried out on 100 of our customers provided us with substantial evidence that the Microsave method of controlling the boiler reduced energy consumption considerably and achieved this without affecting room comfort level or restricting the supply of hot water. We did not receive any complaints from these selected customers during the lengthy testing procedure. The actual savings produced from the 100 customer base test since installation of Microsave units varied from site to site, obviously depending on system design or circumstances of use, but was generally between 15% and 30%. The saving potential is equally applicable to both domestic and commercial installations.

We now fully endorse Microsave and recommend it to our customers who can enjoy the benefit of reduced running costs from the moment of installation. Throughout the three year testing period we did not receive any units returned as faulty, hence confirming the high reliability of the manufactured unit. It is also worthy to note that all Microsave units carry a comprehensive no quibble two year guarantee.

As a load compensating device Microsave is extremely intelligent having a microprocessor as its brain collecting water temperature information from sensing probes. It very quickly reacts to genuine loading demands while completely eliminating unnecessary boiler firing.

Our findings indicate that Microsave produces a high return on investment with typical commercial pay back periods of between 9-16 months even for high consumption users. As a responsible company committed to environmental issues, Calor Gas are delighted to be associated with any produce that significantly reduces carbon dioxide emissions provided, of course, the product has been thoroughly tested and approved. In the case of Microsave our rigorous testing procedure was a severe test for any product which Microsave came through with flying colours.

Yours faithfully  
CALOR GAS NORTHERN IRELAND LIMITED
